

MANUAL TOMCAT LINUX

Miguel Ángel Aranda García

TOMCAT9 EN UBUNTU SERVER

Instalación

Primero actualizamos el sistema

sudo apt update y luego sudo apt upgrade

Instalamos el tomcat9 con el comando:

sudo apt install tomcat9 tomcat9-admin

Comprobamos que se la instalación es correcta con `systemctl status tomcat9`

Configuración:

Editamos el fichero `tomcat-users.xml`

sudo nano /etc/tomcat9/tomcat-users.xml

Debajo de lo que ya hay escrito pero antes de cerrar la etiqueta `tomcat-users` agregamos las líneas:

```
<user username="tomcat" password="isASecret" roles="manager-gui,admin-gui"/>
```

Agregamos el puerto al firewall

Sudo ufw allow 8080/tcp

Reiniciamos el servicio de tomcat

sudo systemctl restart tomcat9

Comprobación

Ahora solo queda entrar en nuestro navegador poniendo:

Dirección Ip del servidor y el puerto: 8080

It works !

If you're seeing this page via a web browser, it means you've setup Tomcat successfully. Congratulations!

This is the default Tomcat home page. It can be found on the local filesystem at: `/var/lib/tomcat9/webapps/ROOT/index.html`

Tomcat veterans might be pleased to learn that this system instance of Tomcat is installed with `CATALINA_HOME` in `/usr/share/tomcat9` and `CATALINA_BASE` in `/var/lib/tomcat9`, following the rules from `/usr/share/doc/tomcat9-common/RUNNING.txt.gz`.

You might consider installing the following packages, if you haven't already done so:

tomcat9-docs: This package installs a web application that allows to browse the Tomcat 9 documentation locally. Once installed, you can access it by clicking [here](#).

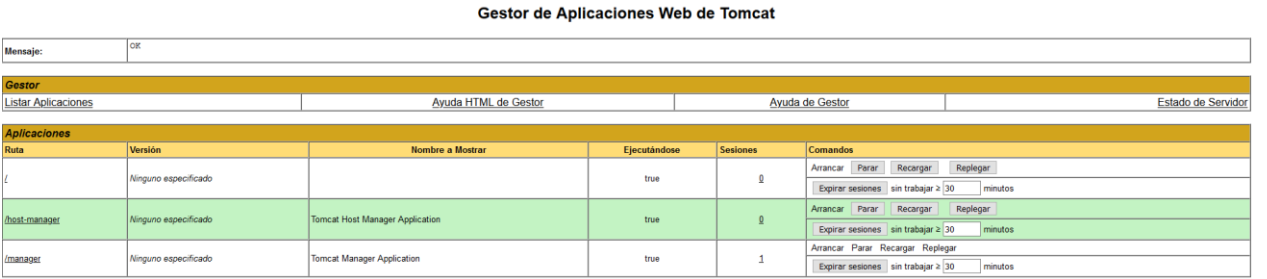

tomcat9-examples: This package installs a web application that allows to access the Tomcat 9 Servlet and JSP examples. Once installed, you can access it by clicking [here](#).

tomcat9-admin: This package installs two web applications that can help managing this Tomcat instance. Once installed, you can access the [manager webapp](#) and the [host-manager webapp](#).

NOTE: For security reasons, using the manager webapp is restricted to users with role "manager-gui". The host-manager webapp is restricted to users with role "admin-gui". Users are defined in `/etc/tomcat9/tomcat-users.xml`.

Para logear pulsamos en el enlace `host-manager webapp`.

Escribimos el usuario y la password agregada al fichero `tomcat-users`

Ya tendríamos instalado y configurado el tomcat9 en Ubuntu
